Simple Résumé

Thank you for purchasing my résumé theme. Filling in your information should be straightforward, here is a list of steps to perform:

1. Fill in your information and links in the “index.html” file. There are comments throughout the file that identify the sections that you need to fill out. Comments begin with `<!--` and end with `-->`. Links will be of the form `href="#"`. You need to replace the `#` with your actual link.
2. Replace “images/yourpic.png” with your picture. Ideally, the image will be 140px x 140px.
3. Replace “images/portfolio1.png”, “images/portfolio2.png”, etc. with images for your portfolio items. These images should be at least 180px by 180px.
4. If you have changed any of the social icons per the instructions, you can change the colors for the mouse hover effect in “css/resume.css”. You can also change the other colors for the site in this file.
5. After you enter all your content, open “index.html” in a web browser and click the print button on the page or go to File... Print in your browser. Remove the headers and footers and print the page to a Pdf. Replace “John Doe.pdf” with this file. Find the line `href="John %20Doe.pdf"` in index.html and change it to the name of this pdf file. `%20` represents a space character.
6. Edit “xyz.php” and change the email address to your email address.

That’s it! Your site can now be uploaded to a web server.
